- Sturdiness and stability
- Water-proof
- Voice Commands

YASHI

Interactive Intelligent Desk

learning becomes a game

Young digital natives live with the idea that anything can be interactive and this bring them to improve their thought process. To help them gaining even better results, Yashi engineered the Interactive Intelligent Desk.

A learning and professional tool since childhood.

Electronic height adjustable

The electronic adjustable height varies from 52cm to 72.5, making the desk suitable for both learning and business.

Zero Gap Technology

Complete gap absence between display panel and front glass grants better touch response, wider view angles and less light reflection.

Brightness of 550nit

Great for any environment. The 550 nit screen is capable of displaying clear, crisp images and videos with any light condition.

Sturdiness and stability

Sturdiness and stability grant a weightload on display panel up to 250 Kg. Rounded corners increase the overall safeness of the machine.

Water-proof

Water-proof: spilling liquids won't compromise the desk functionality, allowing for uninterrupted digital and creative activities.
